SWEDSOFT

GATHERING SWEDISH SOFTWARE

STEW CELEBRATES 10 YEARS - PRESENT AT THIS YEAR'S SOFTWARE CONFERENCE!

The networking conference Software Technology Exchange Workshop, STEW, is a yearly conference, organized since 2012 to create exchange between industry, academia and public sector within software development and research.

The emphasis for STEW is on two main areas; networking and knowledge exchange. What makes the conference special is the focus on networking and discussions, not only with the speakers but also between the participants. Now you have the possibility to speak at STEW 2021!

The tenth STEW conference is organized by the nonprofit organization Swedsoft together with its members and co-hosts AB Volvo, Addalot, Blekinge Institute of Technology, Debricked, Favro, Halmstad University, Ideon Science Park, Linnaeus University, Malmö University, RISE, Saab, Scania, Svenska Elektro- och Dataingenjörers Riksförening and SKF.

At STEW we want to make research and project results visible and available to stimulate new cooperation in software technology.

Theme 2021: Software as a motor for acceleration and disruption

Digitalization gives us new conditions and opportunities to run and develop businesses. Today, it is not uncommon for new technology to shape an entire industry. New technologies and companies emerge and challenge existing ones. Software is the core in this process, enabling the transformation that affects all parts of our society. **Now we are interested to hear what solutions, projects or research you have been working on where software drive development forward or changes it.**

We encourage presentations from different perspectives and those that combine perspectives. These may be technically oriented, domain and industry concerns, methods, interesting ways to use technologies (please note – no product presentations will be accepted), organizational aspects and more.

When presenting research it should be in a state when industry adoption is possible.

Important information

Each presentation will be around 20 minutes followed by discussions and group workshops. The presenter is expected to prepare two to three questions that can be discussed around the tables. STEW does not have any copyright requirements. Hence, presenting at STEW should not prevent the researchers from publishing the results at other conferences.

At least one researcher/company representative must attend the conference and present. We also encourage you to team up with partners. Please note that we will only be able to offer one free attendance per presentation and additional speakers will have to register as participants. We want the main speakers

SWEDSOFT

to be present during the whole conference as the most important part of the STEW conference is the networking and informal exchange.

Practical information and important dates

Conference dates   November 11-12th 2021
Location   Ideon Science Park, Lund

Physical or digital conference

We are hoping that the current situation regarding Covid-19 is better in November 2021 and are planning for a physical conference. The conference will be arranged according to current regulations and in a secure manner for both speakers and participants. If this is not possible, we will arrange the conference digitally on the same date. If recommended by the government, we might also request an official vaccination certificate (sometimes referred to as vaccination passport).

Other important dates

Presentation proposal deadline   May 31st 2021
Notification of acceptance   During the summer
Submission of slides   November 2nd 2021

Register your presentation proposal in this form: **https://bit.ly/3fK69ih**
If you have any questions please contact: **stew@swedsoft.se**

Conference Organizers:

Swedsoft gathers Swedish software in an independent non-profit organization with the mission to increase the competitiveness of Swedish software. Our members are companies, academia and the public sector in Sweden. Together we work to ensure that Sweden is world leading in the development of software and software-intensive products, systems and services. Read more at
